### **Catalogue of Modules**

Master of Science Biomathematik (Biomathematics)

### Contents

Analysis / optimization	5
Approximation	6
Image and signal analysis	7
Differential equations in biology	8
Dynamical systems	9
Fourier analysis / theory of generalised functions	10
Functional analysis	11
Complex analysis	12
Measure theory and integration	13
Non-linear optimization	14
Numerical mathematics II	15
Numerical lab course	16
Optimal control / calculus of variations	17
Partial differential equations	18
Special course I analysis/optimisation	19
Special course II analysis/optimisation	20
Theoretical ecology	21
Discrete mathematics / algorithmics	22
Algebra I	23
Algebra II	24
Algorithmic and complexity theory	25
Computability theory	26
Bioinformatics	27
Coding theory	28
• •	20
Computer graphics	30
Data structures and efficient algorithms	31
-	32
Discrete modelling in biology	32 33
	34
	35
	36
Molecular evolution	37
Practical course software engineering	38
Randomised algorithms	39
Special course I discrete mathematics/algorithmics	40
Special course II discrete mathematics/algorithmics	41
Theoretical computer science	42

Stochastics / statistics	43
Financial and insurance mathematics	44
Mathematical statistics	
Multivariate statistics	
Spatial statistics	
Special course I stochastics/statistics	
Special course II stochastics/statistics	
Game theory	
Stochastic models in biology	
Probability theory	
Time series analysis	34
Seminar modules	55
Seminar A	56
Seminar B	
Ecology	58
Ecology of animals	
Ecology of microbes	
Plant reproductive biology	02
Molecular biology	63
General molecular biology	64
Special molecular biology	
Special molecular biology II	
Special molecular biology III	
Molecular phylogenetics	68
Functional call high my and physicle my	69
Functional cell biology and physiology	70
Physiology of animals and cells	
Special physiology II	
Special physiology III	
Internship / master thesis	74
Occupational internship	
Master thesis	76

The module examinations are done as a 30 min oral exam, a 60 min or 90 min written exam, or as a 60 min oral presentation (seminar). In the seminar module B, a written version of the presentation needs to be created. The criteria for receiving a tutorial certificate are specified by the lecturer in the first lecture week. If no specific criteria are set, it is required to solve 50% of the exercises successfully. Tutorial certificates, seminar certificates and protocols of tutorials or internships are examinations without a mark.

# Analysis / optimization

Modulo Approvimation	
Module Approximation Responsible profes-	Professorship of applied mathematics, professorship of nu-
sor	merical mathematics and optimization
Teaching methods	Lecture (3 credit hours) and tutorial (1 credit hour)
Duration/cycle	1 sem., biennially in summer semester even years (F)
Contents	
<ul> <li>Approximation in n</li> </ul>	ormed spaces
<ul> <li>Continuous and dis</li> </ul>	•
<ul> <li>Interpolation and s</li> </ul>	••
<ul> <li>Parameter identific</li> </ul>	•
	allon
Qualification aims	
<ul> <li>Knowledge of the f</li> </ul>	undamental tasks in approximation theory
•	nost important results in Hilbert spaces
	hods to determine best approximations
	e the approximation quality
•	olying suitable methods in practice
	blying suitable methods in practice
Prior knowledge	Analysis I, II
Language	German
Examination	The module examination consists of a 30 min oral exam. An
	active participation in the tutorial is expected. Both contents
	of lecture and tutorial are examined.
Mark	Mark of the module examination
Workload in h	180 (lecture: 45, tutorial: 15, self-study: 120)
Course credits	6
Degree courses	
M.Sc. Mathematik - anal	
M.Sc. Biomathematik - a	analysis/optimization

Module Image and sign	nal analysis
Teaching methods	Lecture (4 credit hours)
Duration/cycle	1 sem., annually in summer semester (B)
Contents	
<ul> <li>Fast Fourier transformer</li> <li>Fourier series</li> <li>Fourier transformer</li> <li>Wavelets</li> <li>Mathematical morp</li> </ul>	tion
Qualification aims	
formations <ul> <li>Competent choice fields</li> </ul>	ge of the basic mathematical properties of the different trans- of the different transformations according to their application basic mathematical structures for the numeric implementation ns
Prior knowledge	Analysis I, II, ordinary differential equations, linear algebra I, II
Examination	The module examination consists of an oral exam.
Mark	Mark of the module examination
Workload in h	180 (lecture: 60, self-study: 120)
Course credits	6
Degree courses	
M.Sc. Mathematik - anal M.Sc. Biomathematik - a	

#### Module Differential equations in biology **Responsible profes-** Professorship of biomathematics sor Lecture (3 credit hours) and tutorial (1 credit hour) **Teaching methods** Duration/cycle 1 sem., annually in winter semester (A) Contents Stability of ordinary differential equations Bifurcation theory of ordinary differential equations Examples of bifurcations Delayed differential equations Reaction-diffusion equations **Qualification aims** Profound application of different stability criterias Distinction of basic bifurcation types of ordinary differential equations as well as their classification according to their importance in modelling Implementation of complex stability and bifurcation analysis for ordinary, delayed and partial differential equations, also in groups Prior knowledge Analysis I, II, ordinary differential equations, linear algebra I, Ш German Language Examination The module examination consists of a 30 min oral exam. An active participation in the tutorial is expected. Both contents of lecture and tutorial are examined. Mark Mark of the module examination Workload in h 180 (lecture: 45, tutorial: 15, self-study: 120) Course credits 6

Degree courses

M.Sc. Mathematik - analysis/optimization

M.Sc. Biomathematik - analysis/optimization

Module Dynamical sy Besponsible profes	<ul> <li>Professorship of stochastics</li> </ul>
sor	
Teaching methods	Lecture (3 credit hours) and tutorial (1 credit hour)
Duration/cycle	1 sem., biennially in summer semester odd years (D)
Contents	
Basics of dynamic syst	ems:
• •	and complex functions, pathways, periodic points, behaviour in
<ul> <li>Functions on met</li> </ul>	ric spaces, fixed-point theorem, attractors
	ing functions, recurrence, ergodic theorems
	near differential equations
	cal points, bifurcations
	and their characteristics
Qualification aims	
<ul> <li>Knowledge of a c stics and analysis</li> </ul>	comprehensive theory, which connects different fields of stocha
Advanced knowl	edge in analysis, linear algebra, stochastics and differentia Il as knowledge of their cross connections
-	for potentially additional modules such as stochastic processes nalysis, as well as competence in different approaches
•	ng the abstract geometric language and way of thinking, which systems to their substantial properties
<ul> <li>Ability to evaluate</li> </ul>	the practical and social relevance of dynamic processes
Ability to explore	complex systems through computer experiments in the tutorial
Prior knowledge	Analysis I, II, stochastics, ordinary differential equations, ma- thematical biology
Language	German
Examination	The module examination consists of a 30 min oral exam. An active participation in the tutorial is expected. Both contents of lecture and tutorial are examined.
Mark	Mark of the module examination
Workload in h	180 (lecture: 45, tutorial: 15, self-study: 120)
Course credits	6
Degree courses	•

Degree coursesM.Sc. Mathematik - analysis/optimizationM.Sc. Biomathematik - analysis/optimization

sor	Professorship of analysis
Teaching methods	Lecture (4 credit hours)
Duration/cycle	1 sem., biennially in summer semester even years (F)
Contents	
<ul> <li>Convergence of Ferrica</li> </ul>	ourier series
<ul> <li>Convolution produ</li> </ul>	icts
<ul> <li>Fourier inversion f</li> </ul>	ormula, Plancherel's theorem
<ul> <li>Test function spac</li> </ul>	es and distributions
•	empered distributions and their Fourier transformation the concept of weak derivation, embedding theorems, Hilbe
Application of the mathematical physical content in the mathematical content in the mathematical physical content in the mathematical content in the mathematematical content in the mathematical content in the mathematical	theory of partial differential equations, especially those fror sics, fundamental solutions
<ul> <li>Applications in var</li> </ul>	iational calculus, formulation of boundary value problems
Qualification aims	
<ul> <li>Advanced knowled distribution calculution</li> </ul>	dge about the Fourier transformation and the handling of th us
<ul> <li>Competence in the lysis</li> </ul>	e main proof techniques and solution strategies of Fourier and
2	and apply mathematical methods like the translation from ma

M.Sc. Biomathematik - a	inalysis/optimization

#### Module Measure theory and integration

 

 Responsible professor
 Professorship of analysis, professorship of biomathematics

Teaching methodsLecture (4 credit hours) and tutorial (2 credit hours)Duration/cycle1 sem., annually in winter semester (A)

#### Contents

Fundamental principles of measure theory and integration:

- Design of measures
- Lebesgue's integration theory
- Product measure, Fubini's theorem
- Representation theorem (Riesz, Radon-Nikodym)
- $L_p$  spaces

Additional topics, e.g.

- Lebesgue integral on submanifolds of  $\mathbb{R}^n$ , differential forms and Stokes' theorem
- Disintegration and conditional expected values

#### **Qualification aims**

- Knowledge about the advantages and applications of an abstract notion of measure and integration as basis for an advanced study of stochastics and analysis
- Competence in applying the typical analytical and stochastic concepts and understanding their relations
- Competence in advanced proof methods
- Abbility to communicate through free speech and discussion (tutorial)

Prior knowledge	Analysis I, II
Language	German
Examination	The module examination consists of a 90 min written exam or a 30 min oral exam. The criteria for receiving a tutorial cer- tificate are specified by the lecturer in the first lecture week. If no specific criteria are set, it is required to solve 50% of the exercises successfully.
Mark	Mark of the module examination
Workload in h	270 (lecture: 60, tutorial: 30, self-study: 180)
Course credits	9
Degree courses	
B.Sc. Mathematik mit In	formatik - elective - rec. in 5th sem.
M.Sc. Mathematik - ana	lysis/optimization
M.Sc. Biomathematik - a	analysis/optimization

#### Module Optimal control / calculus of variations

Responsible profes-	Professorship of applied mathematics, professorship of nu-
sor	merical mathematics and optimization
Teaching methods	Lecture (3 credit hours) and tutorial (1 credit hour)
Duration/cycle	1 sem., biennially in summer semester odd years (D)

#### Contents

- Variational problems without constraints necessary conditions of 1st order
- Constraints in the form of integrals, differential equations and inequalities
- Optimal control problems and solution of multipoint boundary value problems
- Necessary conditions of 2nd order
- Weierstraß's sufficient condition

#### **Qualification aims**

- Competence in the basic methods of variational calculus in a systematic structure
- Knowledge of the necessary conditions in the case of constraints
- Competence in the numerical methods for solving the resulting boundary value problems
- Understanding the analogy with and differences to optimization problems in the finite-dimensional space
- Ability to handle application-oriented questions with appropriate software
- Ability to communicate and discuss scientifically

Prior knowledge	Analysis I, II
Language	German
Examination	The module examination consists of a 90 min written exam or a 30 min oral exam. An active participation in the tutorial is expected. Both contents of lecture and tutorial are examined.
Mark	Mark of the module examination
Workload in h	180 (lecture: 45, tutorial: 15, self-study: 120)
Course credits	6

sor	ONS
Teaching methods	Lecture (4 credit hours) and tutorial (2 credit hours)
Duration/cycle	1 sem., annually in winter semester (A)
Contents	
theorems, cyclic gr rems	's theorem, normal subgroups and factor groups, isomorphism roups, finite abelian groups, permutation groups, Sylow's theo- factor rings, polynomial rings, Euclidean rings, principal rings,
	field, factorial rings
Qualification aims	
<ul> <li>Understanding of I</li> </ul>	basic principles of algebraic structures
mathematic fields	applicability and advantages of algebraic structures in many
groups, rings, field text	tanding and competence in using the algebraic structures s and terms like factorisation and divisibility in an abstract con- ing methods of the axiomatic approach
Ability to operate	mathematically (developing a mathematical intuition and their training the faculty of abstraction)
-	al communication through free speech and discussions (tutori-
Prior knowledge	Linear algebra I, II
Language	German
Examination	The module examination consists of a 90 min written exam or a 30 min oral exam. The criteria for receiving a tutorial cer- tificate are specified by the lecturer in the first lecture week. If no specific criteria are set, it is required to solve 50% of the exercises successfully.
Mark	Mark of the module examination
Workload in h	270 (lecture: 60, tutorial: 30, self-study: 180)
Course credits	9
Degree courses	
	formatik - compulsory module - rec. in 3rd sem.
M.Sc. Biomathematik - (	discrete mathematics/algorithmics

M.Sc. Biomathematik - discrete mathematics/algorithmics

Module Algebra II	
Responsible profes-	Professorship of analysis, professorship of algebra and func-
sor	tional analytical applications
Teaching methods	Lecture (4 credit hours) and tutorial (2 credit hours)
Duration/cycle	1 sem., biennially in summer semester odd years (D)
Contents	
Cartan's criteria, s and representation or	eory: representation theory of finite groups, absolute reducibi-
lity; Schur's lemma Young tableaux, r	a, characters, irreducible representations of symmetric groups, epresentation theory of classic matrix groups, classic groups, entations of classic groups
Qualification aims	
<ul> <li>Knowledge of alge</li> </ul>	ebraisation of a fundamental notion of symmetry
• •	the collaboration of geometric and algebraic methods
-	basic notion of a representation and its applications in many
-	tics and natural sciences (algebra, operator algebras, physics,
• /	dently develop complex mathematical models
	tence in operating mathematically (developing a mathematical
•	rmal reasoning, improving abstract thinking, argumentation)
	kills in scientific discussions (tutorial)
Prior knowledge	Analysis I, II, algebra I
Language	German
Examination	The module examination consists of a 90 min written exam
	or a 30 min oral exam. The criteria for receiving a tutorial cer-
	tificate are specified by the lecturer in the first lecture week.
	If no specific criteria are set, it is required to solve 50% of the
	exercises successfully.
Mark	Mark of the module examination
Workload in h	270 (lecture: 60, tutorial: 30, self-study: 180)
Course credits	9
Degree courses

#### Module Theoretical computer science

Responsible profes-	Chairman of examination committee
sor	
Teaching methods	Lecture (4 credit hours) and tutorial (2 credit hours)
Duration/cycle	1 sem., annually in summer semester (B)
Contents	

- Formal foundations of the computability theory and the theory of algorithms: the intuitive notion of algorithm and mathematical models of computation (goto programs, while and loop programs, Turing machines, ...), Church-Turing thesis, universal functions and unsolvable problems
- Finite automata and string functions, Boolean functions, two-element Boolean algebra
- Formal languages, the classes of the Chomsky hierarchy and the types of acceptors

#### Qualification aims

- Knowledge of the basic properties and limits of computability
- Understanding of the meaning of computability for computer science
- Understanding of mathematical models of computation and their application
- Ability to classify grammars and formal languages by the types of automata accepting these languages and their power
- Advanced understanding of the interplay between mathematical intuition and the formalization of the notion of computability
- Ability to communicate orally through free speech and discussions (tutorial)

Prior knowledge	Linear algebra, analysis, algorithms and programming
Language	German
Examination	The module examination consists of a 90 min written exam
	or a 30 min oral exam. An active participation in the tutorial is
	expected. Both contents of lecture and tutorial are examined.
Mark	Mark of the module examination
Workload in h	270 (lecture: 60, tutorial: 30, self-study: 180)
Course credits	9
Degree courses	
B.Sc. Mathematik mit	Informatik - compulsory module - rec. in 4th sem.
M.Sc. Biomathematik	- discrete mathematics/algorithmics

<ul> <li>Laws of large num</li> </ul>	bers
	tions, central limit theorem
•	s: e.g. martingales in discrete time, theory of great deviation, nfinitely divisible distributions
Qualification aims	
<ul> <li>Knowledge about t</li> </ul>	he mathematical basics of modern probability theory
•	mulating, systematic classification and solving stochastic pro- nguage of probability theory
Overview of the variety of stochastic methods	
<ul> <li>Ability to independently work with scientific thesis of probability theory</li> </ul>	
<ul> <li>Ability to independ</li> </ul>	ently work scientifically
Prior knowledge	Analysis I, II, stochastics, measure theory
Language	German
Examination	The module examination consists of a 30 min oral exam. The criteria for receiving a tutorial certificate are specified by the lecturer in the first lecture week. If no specific criteria are set, it is required to solve 50% of the exercises successfully.
Mark	Mark of the module examination
	270 (lecture: 60, tutorial: 30, self-study: 180)
Workload in h	
Workload in h Course credits	9

M.Sc. Biomathematik - stochastics/statistics

# Module Time series analysis Responsible professor Professorship of stochastics, professorship of biomathematics sor Lecture (2 credit hours) and tutorial (2 credit hours) Teaching methods Lecture (2 credit hours) and tutorial (2 credit hours) Duration/cycle 1 sem., annually in summer semester (B) Contents Methods and applications of time series analysis: e Basic time series model, trend, periodic and random components

- ARMA processes and their stationarity
- Auto correlation and cross correlation, problems of estimation
- Spectrum and periodogram
- Linear filter and their admittance function
- Multivariate time series, data mining and visualisation

Additional topics, e.g.

- Non-linear time series analysis, more dimensional distributions, entropies
- Time series models in financial mathematics
- VAR-models and Granger causality

#### Qualification aims

- Knowledge about the basic models and statistic processes of time series, both conceptional and in the interactive work with data
- Knowledge about additional methods, questions and approaches
- Collecting practical experiences in dealing with big and complex data structures
- Understanding the specifics of time series (e.g. from economy, financial markets, medicine, language and music)
- Acquisition of a practical view in additon to the modules differential equations, stochastic processes, dynamic systems
- Competence in the abstract geometrical language and mind, which reduces complex systems to their essential properties
- Ability to explore complex systems via computer experiments in the tuorial

Prior knowledge	Analysis, linear algebra, stochastics, statistics, differential equations
Language	German
Examination	The module examination consists of a 30 min oral exam. An active participation in the tutorial is expected. Both contents of lecture and tutorial are examined.
Mark	Mark of the module examination
Workload in h	180 (lecture: 30, tutorial: 30, self-study: 120)
Course credits	6
Degree courses	
M.Sc. Mathematik - stochastics/statistics	
M.Sc. Biomathematik -	stochastics/statistics

## **Seminar modules**

Module Seminar A		
Responsible profes- sor Teaching methods	Professorship of analysis, professorship of numerical mathe- matics and optimization, professorship of applied mathema- tics, professorship of computer science, professorship of al- gebra and functional analytical applications, professorship of stochastics, professorship of statistics, professorship of alge- braic methods of analysis seminar (2 x 2 credit hours)	
Duration/cycle	2 sem., each semester (G)	
Contents		
Additional topics from analysis/optimization, discrete mathema- tics/algorithmics/algebra or stochastics/statistics		
Qualification aims		
<ul> <li>Ability to independently handle a mathematical topic</li> </ul>		
<ul> <li>Ability to give a well-structured, efficient talk that is customised for the audience</li> </ul>		
<ul> <li>Competence in leading a discussion</li> </ul>		
Prior knowledge	Analysis, linear algebra, stochastics, statistics	
Language	German	
Examination	The module examination consists of two 60 min presentations about agreed topics (seminar certificate).	
Mark	None	
Workload in h	180 (seminar: 60, self-study: 120)	
Course credits	6	
Degree courses		
M.Sc. Mathematik - sem		
M.Sc. Biomathematik - a	analysis/optimization	

Module Seminar B		
Responsible profes-	Professorship of analysis, professorship of numerical mathe-	
sor	matics and optimization, professorship of applied mathema-	
	tics, professorship of computer science, professorship of al-	
	gebra and functional analytical applications, professorship of	
	stochastics, professorship of statistics, professorship of alge-	
	braic methods of analysis	
Teaching methods	Seminar (2 credit hours)	
Duration/cycle	1 sem., each semester (G)	
Contents		
<ul> <li>Additional topics from analysis/optimization, discrete mathema- tics/algorithmics/algebra or stochastics/statistics</li> </ul>		
Qualification aims		
<ul> <li>Ability to independ</li> </ul>	ently handle a mathematical topic	
<ul> <li>Ability to give a well-structured, efficient talk that is customised for the audience</li> </ul>		
<ul> <li>Competence in leading a discussion</li> </ul>		
Prior knowledge	Analysis, linear algebra, stochastics, statistics	
Language	German	
Examination	The module examination consists of a 60 min presentation	
	(seminar certificate) and a written report in the scope of 10	
	to 20 pages about an agreed topic.	
Mark	None	
Workload in h	180 (seminar: 30, report: 30 self-study: 120)

# Internship / master thesis

Module Occupational i	nternship	
	Chairman of examination committee	
sor		
Teaching methods	Internship	
Duration/cycle	4 weeks, in recess time	
Contents		
<ul> <li>Internship in a company with mathematics or computer related tasks</li> </ul>		
Qualification aims		
<ul> <li>Insights in the prof</li> </ul>	essional practice of a mathematician or a computer scientist	
<ul> <li>Wide-ranging experience in applying special functional skills in an economic environment</li> </ul>		
Competence in project- and research-oriented team work and communication		
Prior knowledge	Advanced knowledge in application-oriented subdomains of mathematics and computer science	
Language	German	
Examination	The examination consists of a 3 page report about the intern-	
	ship.	
Mark	No mark	
Workload in h	160	
Course credits	6	
Degree courses		
B.Sc. Mathematik mit Informatik - elective - semester, in which the internship is done		

Module Master thesis		
Responsible profes-	Supervising faculty member	
sor		
Teaching methods	Written thesis	
Duration/cycle	9 months, anytime	
Contents		
<ul> <li>Depending on the</li> </ul>	topic	
Qualification aims		
<ul> <li>Ability to independently work on a complex, research-oriented question for a limi- ted time period</li> </ul>		
Competence in recording the achieved results in the form of a scientific thesis		
Prior knowledge	Depending on the topic	
Language	German	
Examination	Written thesis with examination	
Mark	Averaged mark of the supervisors	
Workload in h	900 (self-study: 900)	
Course credits	30	
Degree courses
